UT Tower

Perspective I

Perspective II

Mosaic

I think the pink background really adds to the scene. One thing to notice is that image warping does nothing to "blend" or "mix" the two images together. So the area where the tree in the first image overlaps with the tree in the second image is going to look kind of rough, as there is no way to account for the movement of branches and leaves in each image.

Night Stand

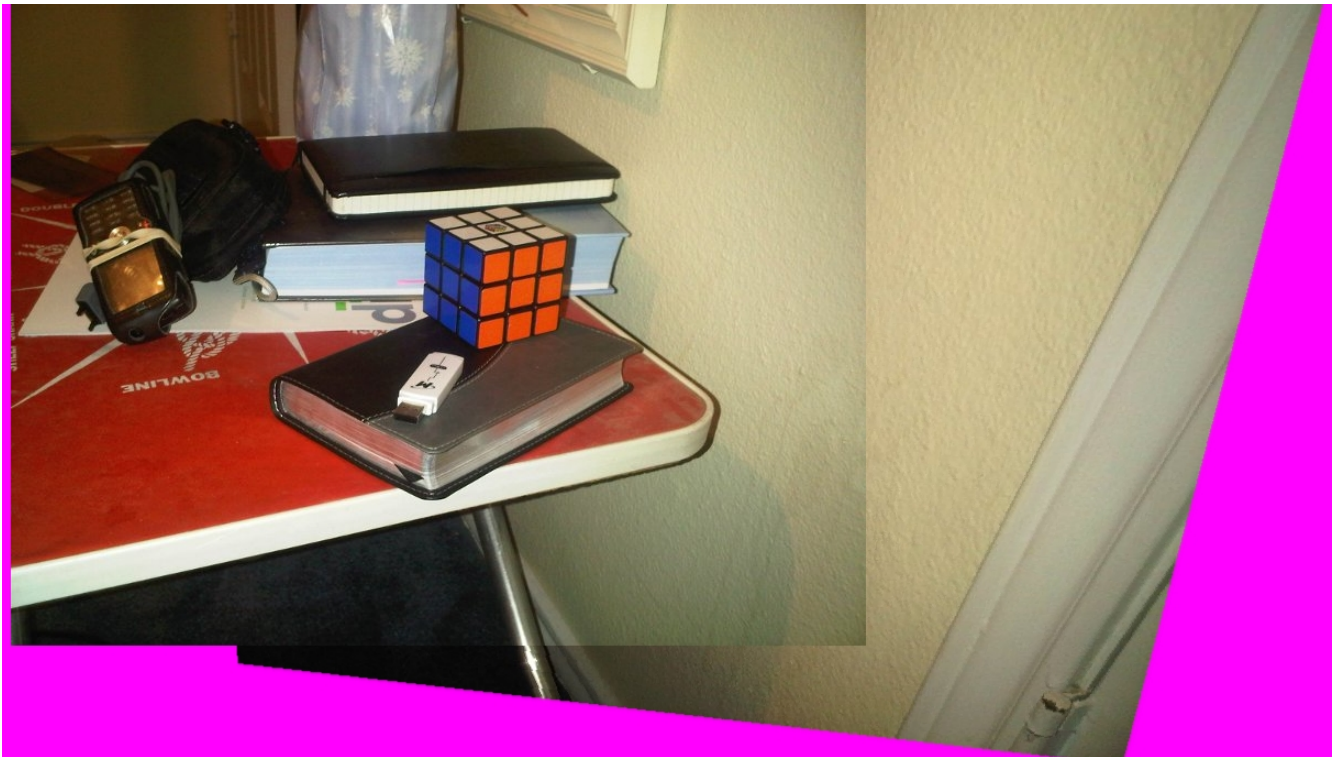

Perspective I

Perspective II

Mosaic

Here I wanted to see if I could get the texture on the wall to be seamless. I did not achieve that goal, however the rest of the image looks fine.

Internal Image Warp
(artwork onto laptop screen)

Artwork

Laptop Screen

[failed] Mosaic

I never figure d out what was going wrong... the warped image would not even come out with parallel lines!

Credit for the artwork belongs to my roommate, Joshua Wier.
